## MARINATION HEAT EXCHANGER

Cooling & Applied Technology, Inc. is proud to present its complete line of Stainless Steel Marination Heat Exchangers. With capacities from 6-12 ton in glycol or ammonia, we can keep your brine in process at 32 degrees at your injector. With three levels of freeze protection, your process can benefit from cold marination to increase retention rates. Transfer pump is sized to give the 7 ft. per second velocity to properly CIP the vessel. The 4-pass, 3-tube design allows for sufficient surface area for efficient heat transfer and, with both ends removable for cleaning and inspection, makes it the right choice for your process. The vessel is insulated and jacketed in stainless steel, ready to set into your plant for many years of trouble-free operation.
